## Maths Progression Grid 2023-2024

## EYFS

## ELG- Maths

Number

## Children at the expected level of development will:

- Have a deep understanding of number to 10, including the composition of each number. Subitise (recognise quantities without counting) up to 5
- Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some number bonds to 10, including double facts Numerical Patterns Children at the expected level of development will:
- Verbally count beyond 20, recognising the pattern of the counting system
- Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity
- Explore and represent patterns within numbers up to 10 , including evens and odds, double facts and how quantities can be distributed equally.

| Strand | Number and Place Value |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year Group | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Year 6 |
| National Curriculum 2014 Objectives | - count to and across 100, forwards and backwards, beginning with 0 or 1, or from any given number <br> - count, read and write numbers to 100 in numerals; count in multiples of twos, fives and tens <br> - given a number, identify one more and one less <br> - identify and represent numbers using objects and pictorial representations | - count in steps of 2, 3, and 5 from 0 , and in tens from any number, forward and backward <br> - recognise the place value of each digit in a two-digit number (tens, ones) <br> - identify, represent and estimate numbers using different representations, including the number line <br> - compare and order numbers from 0 up to 100; use and = signs | - count from 0 in multiples of $4,8,50$ and 100 ; find 10 or 100 more or less than a given number <br> - recognise the place value of each digit in a three-digit number (hundreds, tens, ones) <br> - compare and order numbers up to 1000 <br> - identify, represent and estimate numbers using different representations <br> - read and write numbers up to 1000 in numerals and in words <br> - solve number problems and | - count in multiples of $6,7,9$, 25 and 1000 <br> - find 1000 more or less than a given number <br> - count backwards through zero to include negative numbers <br> - recognise the place value of each digit in a four-digit number (thousands, hundreds, tens, and ones) <br> - order and compare numbers beyond 1000 <br> - identify, represent and estimate numbers using different representations <br> - round any number to the | - read, write, order and compare numbers to at least 1000000 and determine the value of each digit <br> - count forwards or backwards in steps of powers of 10 for any given number up to 1000000 <br> - interpret negative numbers in context, count forwards and backwards with positive and negative whole numbers, including through zero <br> - round any number up to 1 000000 to the nearest 10 , $100,1000,10000$ and 100 | - read, write, order and compare numbers up to 10 000000 and determine the value of each digit <br> - round any whole number to a required degree of accuracy <br> - use negative numbers in context, and calculate intervals across zero <br> - solve number and practical problems that involve all of the above. |

|  | including the number line, and use the language of: equal to, more than, less than (fewer), most, least <br> - read and write numbers from 1 to 20 in numerals and words. | - read and write numbers to at least 100 in numerals and in words <br> - use place value and number facts to solve problems | practical problems involving these ideas | nearest 10,100 or 1000 <br> - solve number and practical problems that involve all of the above and with increasingly large positive numbers <br> - read Roman numerals to 100 (I to C) and know that over time, the numeral system changed to include the concept of zero and place value. | 000 <br> - solve number problems and practical problems that involve all of the above <br> - read Roman numerals to 1000 (M) and recognise years written in Roman numerals |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Coverage | - Counting to 10 <br> - Counting objects to 10 <br> - Writing to 10 <br> - Counting to zero <br> - Comparing numbers of objects <br> - Ordering numbers <br> - Comparing numbers <br> - Counting to 20 <br> - Writing to 20 <br> - Comparing numbers <br> - Ordering numbers <br> - Number patterns <br> - Counting to 40 <br> - Writing numbers to 40 <br> - Counting in Tens and Ones <br> - Comparing numbers <br> - Finding how much more <br> - Making number patterns <br> - Counting to 100 <br> - Finding Tens and Ones <br> - Comparing numbers <br> - Making number patterns | - Counting to 100 <br> - Place value <br> - Comparing numbers <br> - Number bonds <br> - Number patterns | - Counting in hundreds <br> - Counting in hundreds, tens and ones <br> - Place value <br> - Comparing and ordering numbers <br> - Counting in fifties <br> - Number patterns <br> - Counting in fours and eights | - Counting in hundreds and twenty-fives <br> - Counting in thousands <br> - Counting in thousands, hundreds, tens and ones <br> - Using place value <br> - Comparing and ordering numbers <br> - Making number patterns <br> - Counting in sixes, sevens and nines <br> - Rounding numbers <br> - Rounding numbers to estimate <br> - Writing roman numerals for 1 to 20 <br> - Writing roman numerals to 100 | - Reading and writing numbers to 100,000 <br> - Reading and writing numbers to 1,000,000 <br> - Comparing numbers to 1,000,000 <br> - Making number patterns <br> - Rounding numbers <br> - Writing roman numerals to 1000 <br> - Writing years in roman numerals | - Reading and writing numbers to 10 million <br> - Comparing numbers to 10 million <br> - Comparing and ordering numbers to 10 million <br> - Rounding numbers <br> - Adding and subtracting negative numbers <br> - Using negative numbers |
| Knowledge | - Equal means the same in amount, size or number. <br> - More than means greater in amount or size. <br> - Less than means smaller in amount or size. <br> - Most means the biggest number or amount of | - Place value refers to the amount a digit is worth due to its position in a number. <br> - Estimate means to have a sensible guess. <br> - Estimating is calculating the approximate amount, size or value of something. | - A digit is any number from 0-9. <br> - In place value, each place is 10 times the value of the place to its right. | - A positive number is greater than zero. <br> - A negative number is less than zero. <br> - For two or more digits, if the number to the right of the place value number you are rounding is equal to or greater than 5 , round up. | - Temperatures can be measured in Celcius. $0^{\circ} \mathrm{C}$ is the freezing point of water and $100^{\circ} \mathrm{C}$ is the boiling point of water. <br> - For two or more digits, if the number to the right of the place value number you are rounding is equal to or | - In place value, each place is 10 times the value of the place to its right. <br> - For two or more digits, if the number to the right of the place value number you are rounding is equal to or greater than 5 , round up. <br> - If the number to the right of |

Fairfields
something.

- Least means the smallest number or amount of something.
- Less than (<) shows that the value to the left of it is lower than the value to the right of it.
- Greater than ( $>$ ) shows that the value to the left of it is higher than the value to the right of it.
- Equals (=) shows that the number on each side of it has or should have the same value.
- If the number to the right of the place value number you are rounding is less than 5 , round down.
- Estimate means to quickly find, with some thought of the calculation, an approximate value close to the right value.
- Inverse operations are opposites that reverse the oppositer effect of the other
operation.
- In Roman numerals $\mathrm{I}=1, \mathrm{~V}=5$, $X=10, L=50$ and $C=100$. All numbers between 1 and 100 can be written using a combination of these.
- If a lower value numeral is placed after a higher value numeral, it indicates they should be added together.
- If a lower value is placed before a higher value numeral, it should be numeral, it should be
subtracted from the higher value.

## greater than 5, round up.

- If the number to the right of the place value number you are rounding is less than 5 , round down.
- In Roman numerals $\mathrm{I}=1, \mathrm{~V}=5$, $X=10, L=50, C=100, D=500$ and $M=1000$. All numbers between 1 and 100 can be written using a combination of these.
- If a lower value numeral is placed after a higher value numeral, it indicates they should be added together.
- If a lower value is placed before a higher value numeral, it should be numeral, it should be value.
- Years are sometimes written in Roman numerals, for example 2020 is MMXX.

PRIMARY SCHOOL
the place value number you are rounding is less than 5 , round down.

- Positive integers are whole numbers greater than zero
- Negative integers are whole numbers less than zero.
National Curriculum
2014 Objectives
- read, write and interpret mathematical statements involving addition (+), subtraction ( - ) and equals (=) signs
- represent and use number bonds and related subtraction facts within 20
- add and subtract one-digit and two-digit numbers to 20 , including zero
- solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7=-9$.
- solve problems with addition and subtraction: using concrete objects and pictorial representations, including those involving numbers, quantities and measures
applying their increasing knowledge of mental and written methods
- recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100
- add and subtract numbers using concrete objects, pictorial representations, and mentally, including:
a two-digit number and ones
a two-digit number and tens
two two-digit numbers adding three one-digit numbers
- show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot
- recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number solve miss - simple adding - adding with renaming - simple subtraction
- subtracting with renaming
- add and subtract numbers mentally, including: a three-digit number and ones
a three-digit number and tens
a three-digit number and hundreds
- add and subtract numbers with up to three digits, using formal written methods of columnar addition and subtraction
- estimate the answer to a calculation and use inverse operations to check answers
- solve problems, including missing number problems, using number facts, place using number facts, place addition and subtraction
- add and subtract numbers with up to 4 digits using the formal written methods of columnar addition and subtraction where appropriate
- estimate and use inverse operations to check answers to a calculation
- solve addition and subtraction two-step subtraction two-step problems in contexts,
deciding which operation and methods to use and why.
- add and subtract whole numbers with more than 4 digits, including using formal written methods (columnar addition and subtraction)
- add and subtract numbers mentally with increasingly large numbers
- use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy
- solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why.

| - making number bonds | - simple adding |
| :---: | :---: |
| - making number stories | - adding with renaming |
| - add by using number | - simple subtraction |
| bonds | - subtracting with renaming |

## facts

|  | Multiplication and Division |  |  |  |  |  |
|  | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Year 6 |
| National Curriculum 2014 Objectives | - solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher. | - recall and use multiplication and division facts for the 2,5 and 10 multiplication tables, including recognising odd and even numbers <br> - calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication $(\times)$, division $(\div)$ and equals (=) signs <br> - show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot <br> - solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts | recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables <br> write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times onedigit numbers, using mental and progressing to formal written methods: solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects. | - recall multiplication and division facts for multiplication tables up to $12 \times 12$ <br> - use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1 ; dividing by 1 ; multiplying together three numbers <br> - recognise and use factor pairs and commutativity in mental calculations <br> - multiply two-digit and threedigit numbers by a one-digit number using formal written layout <br> - solve problems involving multiplying and adding, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and harder correspondence problems such as $n$ objects are connected to m objects. | - identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers <br> - know and use the vocabulary of prime numbers, prime factors and composite (nonprime) numbers <br> - establish whether a number up to 100 is prime and recall prime numbers up to 19 <br> - multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for twodigit numbers <br> - multiply and divide numbers mentally drawing upon known facts <br> - divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context <br> - multiply and divide whole numbers and those involving decimals by 10,100 and 1000 Mathematics - key stages 1 and 233 Statutory requirements <br> - recognise and use square numbers and cube numbers, and the notation for squared ( 2 ) and cubed (3) <br> - solve problems involving | - multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication <br> - divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context <br> - divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context <br> - perform mental calculations, including with mixed operations and large numbers <br> - identify common factors, common multiples and prime numbers <br> - use their knowledge of the order of operations to carry out calculations involving the four operations <br> - solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why Mathematics - key stages 1 and 240 Statutory requirements <br> - solve problems involving |

|  |  |  |  |  | multiplication and division including using their knowledge of factors and multiples, squares and cubes <br> - solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign <br> - solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates | addition, subtraction, multiplication and division <br> - Use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Coverage | - making equal groups <br> - making equal rows <br> - making doubles <br> - solving word problems <br> - grouping equally <br> - sharing equally | - multiplication as equal groups <br> - 2 times table <br> - 5 times table <br> - 10 times table <br> - Multiplying by 2, 5 and 10 <br> - Solving word problems <br> - Grouping <br> - Sharing <br> - Dividing by 2 <br> - Dividing by 5 <br> - Dividing by 10 <br> - Multiplication and division <br> - Solving word problems <br> - Odd and even numbers | - Multiplying by 3 <br> - Multiplying by 4 <br> - Multiplying by 4 and 8 <br> - Multiplying by 8 <br> - Dividing by 3 <br> - Dividing by 4 <br> - Multiplying and dividing <br> - Dividing by 4 and 8 <br> - Solving word problems <br> - Solving problems <br> - Multiplying 2-digit numbers <br> - Multiplying with regrouping <br> - Dividing 2-digit numbers <br> - Dividing with regrouping <br> - Solving word problems | - Multiplying by 6 <br> - Multiplying by 7 <br> - Multiplying by 9 <br> - Multiplying by 11 <br> - Multiplying by 12 <br> - Dividing by 6 <br> - Dividing by 7 <br> - Dividing by 9 <br> - Multiplying and dividing by 11 and 12 <br> - Dividing with remainder <br> - Solving word problems <br> - Multiplying by 0 and 1 <br> - Dividing by 1 <br> - Multiplying the same two numbers <br> - Multiplying three numbers <br> - Multiplying multiples of 10 <br> - Multiplying 2-digit numbers <br> - Multiplying multiples of 100 <br> - Multiplying three-digit numbers <br> - Dividing 2-digit numbers <br> - Dividing 3-digit numbers <br> - Solving word problems | - Finding multiples <br> - Finding factors <br> - Finding common factors <br> - Finding prime numbers <br> - Finding square and cube numbers <br> - Multiplying by 10,100 and 1000 <br> - Multiplying 2-digit and 3-digit numbers by a single digit <br> - Multiplying 4-digit numbers <br> - Multiplying a 2-digit number by a 2-digit number <br> - Multiplying a 3-digit number by a 2-digit number <br> - Dividing by 10,100 and 1000 <br> - Dividing 3-digit and 4-digit numbers <br> - Dividing 4-digit numbers <br> - Dividing with remainder <br> - Solving word problems | - Using mixed operations <br> - Multiplying by 2-digit numbers. <br> - Dividing by 2-digit numbers. <br> - Solving word problems <br> - Finding common multiples <br> - Finding common factors <br> - Finding prime numbers |
| Knowledge | - Doubling is adding the same number to itself. <br> - Halving is dividing or sharing a number into two | - Multiplication ( x ) is repeated addition. <br> - Division is splitting or sharing into equal parts. | - Inverse operations are opposites that reverse the effect of the other operation. | - Inverse operations are opposites that reverse the effect of the other operation. | - Factors are whole numbers that divide exactly into another number. The original numbers are factors | - A remainder is the whole number left over after a division calculation. Remainders can be |

Fairfields
PRIMARY SCHOOL

- An even number is any number ending in $0,2,4$, 6 or 8.
- An odd number is any number ending in $1,3,5$, 7 or 9 .
- Numbers can be multiplied in any order and the answer will be the same.
- Numbers cannot be divided in any order to give the same answer.
- Division is the opposite of multiplication.
- Multiplication is the opposite of division.
- Multiplication and division are inverse operations.
- A positive number is greater than zero.
- A negative number is less than zero.
- An integer is a whole number that can be scaled up using repeated addition or multiplication.
- Correspondence in maths is how things are related There are different types of elationship: one to one, one to many, many to one and many to many.
- Multiplication and division are inverse operations.
- Multiples are the values in that number's times table. that number's times table. For example, the multiples of 6 are $6,12,18$ and so on.
- Multiplying by 2 is the same as doubling.
- Multiplying by 4 is the same as doubling and doubling again.
- Multiplying by 10 and halving is the same as multiplying by 5 .
- Factors are whole numbers that divide exactly into another number. The original numbers are factors of the product number.
- Factor pairs are sets of two factors that when multiplied together give a particular number.
- Partitioning breaks a number into its place value units.
- The distributive law is that multiplying a number by a group of numbers added together is the same as doing each multiplication separately then adding them together.
- The associative law is that it doesn't matter how numbers are grouped (calculated) when adding or multiplying them
- An integer is a whole number that can be scaled up using repeated addition or multiplication.
- Correspondence in maths is how things are related.
of the product number.
- Factor pairs are sets of two factors that when multiplied together give a particula number.
- Common factors are factors found in more than one number.
- Prime numbers are whole numbers that are greater than 1 and can only divide by themselves and 1
- Prime factors are prime numbers that can be multiplied together to give the original number.
- Composite numbers are non-prime numbers (whole numbers that can be made by multiplying more than one pair of factors).
- Primae numbers are whole numbers that are greater than 1 and can only divide themselves and $1,2,3,5,7$, $11,13,17$, and 19 are prime numbers.
- A square number is a number multiplied by itself.
- A cube number is a number multiplied by itself three times.
- A remainder is the whole number left over after a division calculation.
- The notation for square numbers is ( ${ }^{2}$ ) and cube numbers is ( ${ }^{3}$ ).
- Equals (=) shows that things on both sides of it have or should have the same value
interpreted as fractions or rounded to whole numbers depending on the context.
- Multiples are the result after multiplying a number by an integer. They are in the given number's times table.
- Common multiples are multiples of two or more numbers
- Factors are whole numbers that divide exactly into another number
- Common factors are factors found in more than one number.
- Prime numbers are whole numbers that are greater than 1 and can only divide by themselves and one.
- The acronym BODMAS can be used to remember the order in which operations should be calculated: brackets, orders (powers), division, multiplication, addition and subtraction.
- Estimate means to quickly find, with some thought of the calculation, an
approximate value close to the right value.

|  |  |  | Geometry - Properties of Shape |  |
|  | Year 1 | Year 2 | Year 3 | Year 4 |
| National Curriculum 2014 Objectives | - Recognise and name common 2-D shapes (for example, rectangles (including squares), circles and triangles). <br> - Recognise and name common 3-D shapes (for example, cuboids (including cubes), pyramids and spheres). | - Identify and describe the properties of 2-D shapes, including the number of sides and line of symmetry in a vertical line. <br> - Identify and describe the properties of 3-D shapes, including the number of edges, vertices and faces. <br> - Identify 2-D shapes on the surface of 3-D shapes (for example, a circle on a cylinder and a triangle on a pyramid). <br> - Compare and sort common 2-D and 3-D shapes and everyday objects. | - Draw 2-D shapes and make 3-D shapes using modelling materials; recognise 3-D shapes in different orientations and describe them. <br> - Recognise angles as a property of shape or a description of a turn. <br> - Identify right angles, recognise that two right angles make a half-turn, three right angles make three quarters of a turn and four complete a turn; identify whether angles are greater than or less than a right angle. | - Compare and classify geometric shapes, including quadrilaterals and triangles, based on their properties and sizes. <br> - Identify acute and obtuse angles and compare and order angles up to two right angles by size. <br> - Identify lines of symmetry in 2-D shapes presented in different orientations. <br> - Complete a simple symmetric figure with respect to a specific line of symmetry. |

- In place value, each place is 10 times the value of the place to its right, including after the decimal point.
- \% is the symbol for percent and percent is the number of parts per hundred.
equivalents. They also form part of mixed numbers.
- In place value, each place is 10 times the value of the place to its right.
- A simple fraction has a whole number for a numerator and denominator.

Year 5

- Identify 3-D shapes, including cubes and other cuboids, from 2-D representations.
- Know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles.
- Draw given angles, and measure them in degrees
- Identify angles at a point and one whole turn (total $360^{\circ}$ )
- Identify angles at a point on a straight line and $1 / 2$ a turn (total $180^{\circ}$ )
- Identify other multiples of $90^{\circ}$.
- Use the properties of rectangles to deduce related facts and find missing lengths and angles.
- Distinguish between regular and irregular polygons based on reasoning about equal

| Knowledge | - These are common 2-D shapes: squares, rectangles, circles, triangles, pentagons, hexagons and octagons. <br> - Common 3-D shapes include cuboids, cubes, spheres, cones, cylinders and pyramids. | - A two-dimensional (2-D) shape only has two measurements. <br> - These are common 2-D shapes: squares, rectangles, circles, triangles, pentagons, hexagons and octagons. <br> - A shape has symmetry in a vertical line if a line can be drawn down the middle of it and the left side is a mirror image of the right. <br> - Squares and rectangles have four sides and a vertical line of symmetry. <br> - Circles have one side and a vertical line of symmetry. Triangles have three sides and may have a vertical line of symmetry. <br> - A vertex of a 3-D shape is | - A two-dimensional shape only has two measurements. <br> - A three-dimensional shape has three measurements and can be held. <br> - Common 3-D shapes include cuboids, cubes, spheres, cones, cylinders and pyramids. <br> - A vertex of a 3-D shape is a corner where lines meet. <br> - The plural of vertex is vertices. <br> - An edge of a 3-D shape joins two vertices. <br> - The flat surface of a 3-D shape is called a face. <br> - An angle is the amount of turn, or space, between two lines around their vertex and is measured in degrees. <br> - A right angle is a quarterturn. | - A quadrilateral is a foursided shaped (quad is derived from the Latin word meaning four and lateral is related to sides). <br> - A square has four equal sides, four right angles and four lines of symmetry. <br> - A rectangle or oblong has two sets of two equal sides, four right angles and four lines of symmetry. <br> - A parallelogram has two sets of two equal sides, two sets of two equal angles and usually no lines of symmetry. <br> - A trapezium has at least two parallel sides and can have pairs of equal angles and a line of symmetry. <br> - A triangle is a three-sided shape (tri is derived from | - An angle is the amount of turn, or space, between two lines around their vertex and is measured in degrees. <br> - An acute angle is less than a right angle $\left(90^{\circ}\right)$. <br> - An obtuse angle is greater than a right angle $\left(90^{\circ}\right)$ but less than a straight angle $\left(180^{\circ}\right)$. <br> - A reflex angle is greater than a straight angle $\left(180^{\circ}\right)$ but less than $360^{\circ}$ (a complete rotation). <br> - A polygon (a 2-D shape formed with straight lines) is regular when all sides and angles are equal. <br> - A polygon is irregular if it has different length sides and/or angles. | - The conventional marking for parallel lines are > in the centre of the pair of two parallel lines. >> is used for a second pair of parallel lines within a shape. <br> - Arcs are used to represent angles and a square is used to represent a right angle $\left(90^{\circ}\right)$. <br> - Some 3-D shapes, like cubes and pyramids, can be opened or unfolded along their edges to create a flat shape. The unfolded shape is called the net of the solid. <br> - A quadrilateral is a four sided shape (quad is derived from a Latin word meaning four and lateral is related to sides). <br> - A square has four equal sides, four right angles and four lines of symmetry. |

Fairfields
PRIMARY SCHOOL

- Two right angles make a half-turn.
- Three right angles make three-quarters of a turn.
- Four right angles make a complete turn.
- Horizontal lines go across
- Vertical lines go up and
down
- Perpendicular lines are lines that form a right angle where they meet or cross
- Parallel lines never meet or cross. They are always the same distance apart

Latin and Greek meaning three).

- An equilateral triangle has three equal sides and angle three eq
and thre
and three lines of symmetry
- An isosceles triangle has two equal sides and angles.
A scalene triangle has no equal sides and no equal angles.
- A right-angled triangle has a $90^{\circ}$.
- The angles in any triangle add up to $180^{\circ}$
- An acute angle is less than a right angle ( $90^{\circ}$ ).
- An obtuse angle is greater than a right angle $\left(90^{\circ}\right)$ but less than a straight angle $\left(180^{\circ}\right)$.
- A shape or object is symmetrical if you can draw a straight line vertically, horizontally or diagonally down the middle of it and the two sides are a mirror image of each other
- The straight, often imaginary, lines are called lines or axes of symmetry.
- A parallelogram has two sets of two equal sides, two set of two equal angles and usually no lines of symmetry.
- A rhombus has four equal sides, two sets of two equal angles and two lines of symmetry.
- A trapezium has at least two parallel sides and can have pairs of equal angles and a line of symmetry.
- A triangle is a three sided shape (tri is derived from Latin and Greek meaning three).
- An equilateral triangle has three equal sides and angles and three lines of symmetry.
- An isosceles triangle has two equal sides and angles.
- A scalene triangle has no equal sides and no equal angles.
- A right-angled triangle has a $90^{\circ}$ angle.
- The angles in any triangle add up to $180^{\circ}$.
- A circle is a 2-D shape
- A circle's perimeter is called circumference.
- Diameter of a circle is the straight line segment that passes through the centre.
- Radius is a straight line from the centre to the
circumference of a circle and is half the diameter
- Angle is the amount of turn or space between two lines around the vertex and is measured in degrees ( ${ }^{\circ}$ )
- An acute angle is less than a right angle.

Fairfields
An obtuse angle is greater than a right angle but less than a straight angle $\left(180^{\circ}\right)$

- A reflex angle is greater than a straight line angle but less than $360^{\circ}$ (a complete rotation)
- Vertically opposite angles are the angles opposite each other when two lines cross and are always equal.
- The angles in a quadrilateral or polygon add up to $360^{\circ}$.

## Geometry - Position and Direction

## National Curriculum 2014 Objectives

- Describe position, Direction and movement, including whole, half quarter and three-quarter turns.

## Year 3

- draw 2-D shapes and make 3-D shapes using modelling materials recognise 3-D shapes in different orientations and describe them
- recognise angles as a property of shape or a description of a turn
- identify right angles, recognise that 2 right angles make a half-turn, 3 make three-quarters of a turn and 4 a complete turn; identify whether angles are greater than or less than a right angle
- identify horizontal and vertical lines and pairs of perpendicular and

## Year 5

- Identify, describe and represent the position of a shape following a reflection or translation, using the appropriate language, and know that the shape has not changed.

## Year 6

- Describe positions on the full coordinate grid (all four quadrants).
- Draw and translate simple shapes on the coordinate plane, and reflect them in the axes.

Fairfields
PRIMARY SCHOOL
from head to foot or top

- Mass or weight is the measure of the amount something and how heavy it is.
- Capacity is how much a container can hold.
- Volume is the space that water takes up in a container.
- Time can be measured using hours, minutes and seconds.
- Events can be sequenced using these words: before, after, now, next, first, today, yesterday, tomorrow, morning afternoon, evening, earlier and later.
- The past refers to events that have already happened.
- The present refers to events that are happening now.
- The future refers to events that haven't happened yet.
- There are seven days in a week: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday and Sunday.
- There are twelve months in a year: January, February, March, April, May, June, July, August, September, October, November and December
- There are four seasons in a year: Spring, Summer, Autumn and Winter.
- Length is a measure of how long something is from end to end.
- Height is a measure of how high something is from head to foot or top to base.
- Mass or weight is the measure of the amount of something and how heavy it is.
- Capacity is how much a container can hold.
- Volume is the measure of the space something takes up.
- Equals shows that things on both sides of it have or should have the same value.
- Less than shows that the value to the left of it is lower than the value to the right of it.
- Greater than shows that the value to the left of it is higher than the value to the right of it.
- Money can be measured in pounds and pence.
- There are 100 p in $£ 1$.
- Change is the money returned to someone when they have paid for an item with an amount that is greater than the price.
- An analogue clock face can be divided into 60 minutes. It often shows 5 minute intervals using the numbers from 1 to 12 on the face.
- The hour hand is the
- O'clock is used after a number from 1 to 12 to give the time when it is exactly that hour.
- A time is in the morning if it is followed by 'am' and in the afternoon if it is followed by 'pm'.
- Noon is 12 pm and midnight is 12 am .
- There are 60 seconds in a minute, 60 minutes in an hour and 24 hours in a day.
- There are 365 days in a year and 366 in a leap year which occurs every fourth year
- The months of the year are January (31 days), February ( 28 or 29 days), March ( 31 days), April (30 days), May (31 days), June (30 days), July (31 days), August (31 days), September (30 days), October (31 days), November (30 days) and December ( 31 days).
- Duration is the length of time something lasts.
(approximately $1 / 2$ I)
- 1 gallon $=8$ pints $=4.5$.
- Perimeter is the total distance around the edge of a shape.
- A composite shape is made of two or more rectilinear figures (polygons with interior angles of $90^{\circ}$ or $270^{\circ}$, including squares).
- The area of a rectangle (including squares) is calculated by multiplying its height by its width.
- Standard units of area are square centimetres or centimetres squared ( $\mathrm{cm}^{2}$ ) and square metres or metres squared $\left(\mathrm{m}^{2}\right)$.
- Capacity is a measure of how much something can hold.
- Volume is the measure of the space that an object or liquid takes up.
- There are 60 minutes in an hour and 60 seconds in a minute.
- There are 7 days in a week, between 28 and 31 days in a month, 365 days in a year and 366 in a leap year, which occurs every fourth year.
- The area of a triangle is found by multiplying its height by the width and then dividing by 2 .
- The area of a parallelogram is found by multiplying the base by the height.
- Volume of cubes and cuboids are calculated by multiplying the length, width and height
- Standard units of volume are cubic centimetres or centimetres cubed and cubic metres or metres cubed.

|  | - The hour hand is the shorter hand on a clock and the minute hand is the longer hand. <br> - On an analogue clock, the minute hand points to 12 when it is an o'clock time and points to 6 when it is half past the hour. | shorter hand on a clock and the minute hand is the longer hand on a clock. <br> - Clockwise is the movement round a clock from left to right and hands move in a clockwise direction. <br> - On an analogue clock, the minute hand points to 12 when it is an o'clock time and points to 6 when it is half past the hour. <br> - The minute hand points towards the 3 at quarter past and 9 at quarter to the hour. <br> - There are 60 seconds in a minute, 60 minutes in an hour and 24 hours in a day. |  |  |  |  |
